Department of Radiology

Schedules /Conferences /Colloquia :

Call Schedule

Call is scheduled in the following increments:

Weekday evening shift	5pm- 8pm
Senior night float	8pm - 8am
Junior night float	8pm - 8am
Weekends	12-hour shifts assigned
Holidays	12-hour shifts requested

On weekdays, the period between 5 PM and 8 PM is covered by the junior residents and the attending assigned to the evening shift. (Angio is covered by the angio resident until 8 PM.) The resident on evening call carries both pagers until the night float residents arrive at 8 PM.

Junior and senior night float are regular rotations and are included on the rotation schedule. The night float hours are Sunday night through Thursday night, 8 PM to 8 AM. The night float rotations are scheduled in two-week increments. During night float, the junior resident carries the primary call pager and the senior resident carries the specials pager . There are on-call faculty members available by pager for both general radiology and the cardiac/interventional area. The resident on night float will have no duties during the daytime hours for the weeks that they are on call; however, all their cases must be checked out and signed off prior to their going home each morning.

The weekend call schedule is published separately from the rotation schedule and is arranged by the Chief Resident(s). Weekend night call is Friday and Saturday night, 8 PM to 8 AM. Weekend day call is Saturday and Sunday, 8 AM to 8 PM. Sunday night is covered by the night float residents. The residents sign up for holiday call at the beginning of each year, generally taking two 12-hour shifts each, with senior residents given first preference.

Conferences

Resident conferences are held in the radiology conference room M253 at 7:15 a.m. and 12:00 noon daily (Monday through Friday), with additional conferences scheduled on occasion. A conference schedule is published and distributed on a monthly basis with topics and times for each conference. The conferences consist of both didactic lectures and case conferences and each of the sub-specialty topics are covered at least once a month, except during the summer months, when an intensive course of physics lectures is given.

Introductory lectures for the PGY1's are offered as part of the July conference schedule. The Advanced Radiological Life Support (ARLS) videos are also shown as part of the PGY1 preparation.

Colloquia/Journal Club

Each resident will present one 30-minute conference per year on a relevant topic which has been pre-approved by the Program Director. The colloquia should be Power Point presentations, and are attended by both residents and faculty.

Each resident will also present a minimum of two academic articles per year from refereed journals to the monthly Journal Club. The articles may be selected by the resident from those provided by faculty members or they may select an article from their own reading. Each presentation should be a brief summary and should be no more than ten or fifteen minutes long. Copies of the articles are provided to all residents prior to the Journal Club meeting so that an active discussion may take place. Both colloquia and Journal Club topics must be pre-approved by an appropriate faculty member.
